ASKING REFLECTIVE QUESTIONS

1. Give a description of a successful teaching experience.
   Think about a specific teaching experience you have had recently. It does not need to be a
   recent one but one that is clear for you. Describe the situation for someone else so that they
   understand what happened and what you did.

2. Why was this experience a success?
   Describe what you think made this situation a success – what is success for you?

3. What elements contributed to the success of the situation?
   Describe the elements that think contributed to the success of the situation.

4. Describe an unsuccessful situation
   Think back to a recent teaching situation that was unsuccessful. Describe the situation for
   someone else. Say what happened and what you did.

5. Why was this situation unsuccessful?
   Describe what you think were the reasons for the situation being unsuccessful. What were the
   barriers to success?

6. What were the elements that contributed to your dissatisfaction with the situation?
   Describe the elements that could have contributed to the failure of the situation.

7. What could have changed the situation?
   Describe what you think could have made a positive difference to the outcome of this
   situation.

8. What happened after the unsuccessful teaching situation?
   Describe what you thought or what you did when you came out of the unsuccessful teaching
   situation.

SUGGESTION
• The teacher is given time to reflect on and answer the above questions in note form in their own time.
• The reflection notes are then shared with a mentor (colleague, leader, researcher or supervisor).
• The mentor is given time to read and reflect on the notes which are the starting point for the dialogue.
• When the dialogue takes place, the notes are used to stimulate a conversation about the situations
   described. There are no wrong answers.
• During the dialogue notes must be made, or the dialogue can be recorded for later use.
• Use the framework for the method presented in the video.

Empowering Teachers Through Reflective Educational Dialogue

A handout supporting the video material by Lea Lund & Sarah Robinson

The content of the video:
• The basic elements of a reflective educational dialogue.
• For teachers and leaders to develop educational awareness.

DEVELOPING EDUCATIONAL VOCABULARY & PEDAGOGICAL AWARENESS

Fact → Claim → Warrant

TEACHERS PROFESSIONAL DEVELOPMENT
Elaborating on why you do what you do

The whole point of the method is to develop a teaching cohort and educational leaders who are extremely good at presenting sound arguments for the educational choices they make. For why you do what you do.

In the video we show you a couple of examples of how you can work with your hidden beliefs, values and experiences and make these visible to yourself. When these are visible, you become aware and are then able to constructively reflect in dialogue with others on how you can change them.

This is what we call a reflective educational dialogue. The design and framework is inspired by research into teacher thinking and research into teachers’ professional development, teacher training and teachers’ bibliography.

"When teachers write about their own biographies and how they feel these have shaped the construction of their values, then they are able to see more clearly how social and institutional forces beyond the classroom and school have been influential"  
(Smyth, 1989)

The aim of the method is to

• Make visible teachers own belief and value systems and challenge these unreflected beliefs about teaching.

• To develop an educational awareness and language for analyzing their own practices.

Background
The method is based on the results of a PhD. research carried out in Danish Adult Education by Lea Lund (2015) building on Gary Fenstermacher’s research on teachers’ practical argument. Lea Lund was curious about how teachers reflected on what happened in their classroom as she believe that much of their learning happens in the classroom while they teach.

The method we present in this video has been tried and tested on over 600 teachers in High Schools and in Teaching Colleges in Denmark and further education.

In professional development courses we have used this method to articulate their values and beliefs and experiences of good teaching. This means that they have worked to construct good arguments from their initial statements about their teaching.
